

Electronic design or telecommunications engineer

➤ DESCRIPTION

DAS PHOTONICS is an upcoming and pioneering Spanish High-Tech enterprise whose mission is to develop innovative solutions, based on proprietary, high-performance photonic technology for the defense and space sectors. In recent few years, quantum systems and communications have rapidly stormed into these fields with an exponential growth, providing both novel and unprecedented applications. Being aware of this, **DAS PHOTONICS is seeking strong candidates with a solid background in the field of Electronic design or telecommunications**. The candidate will be required to conduct independent research while also contributing to team-oriented projects.

➤ MAIN RESPONSIBILITIES

- Analog and digital electronic design or power electronics design.
- Simulation of electronic systems.
- Selection of components.
- Drafting and execution of test plans as well as support in test campaigns.
- Drafting of design documentation, test and deliverable to client or internal.

➤ QUALIFICATION REQUIREMENTS

- ✓ Degree in Electronic engineering or telecommunications.
- ✓ Electronic design in analog and digital.
- ✓ English language spoken/written fluency and good communication skills.

DAS PHOTONICS offers a permanent position (indefinite contract from the beginning). Additionally, we are integrated in a highly technological environment where prestigious international projects are carried out and developed. Remuneration will be established according to experience.

If interested, please, send us both your CV and a motivation letter to rrhh@dasphotonics.com
